

## Eaton Street

(from Vinal Street to Beach Street)

Eaton Street is a relatively short street, approximately four hundred twelve (412') feet running from Beach Street to Vinal Street. Eaton Street has become a heavily travelled roadway as drivers use the road as an alternative to the traffic gridlock on Broadway.

Between Beach Street and Hall Street there are numerous pothole patches and alligator cracking traverse the roadway. The section of roadway between Hall Street and Vinal Street was milled and paved under the Ambrosino Administration and with the exception of a roadway patch in front of a driveway is in good condition. Bituminous sidewalks and concrete curbing runs the length of the street.

Our suggestions for Eaton Street between Beach and Hall Street are as follows:

- Remove the bituminous sidewalks and replace with concrete sidewalks.
- Install granite curbing
- Mill the roadway
- Pave the roadway

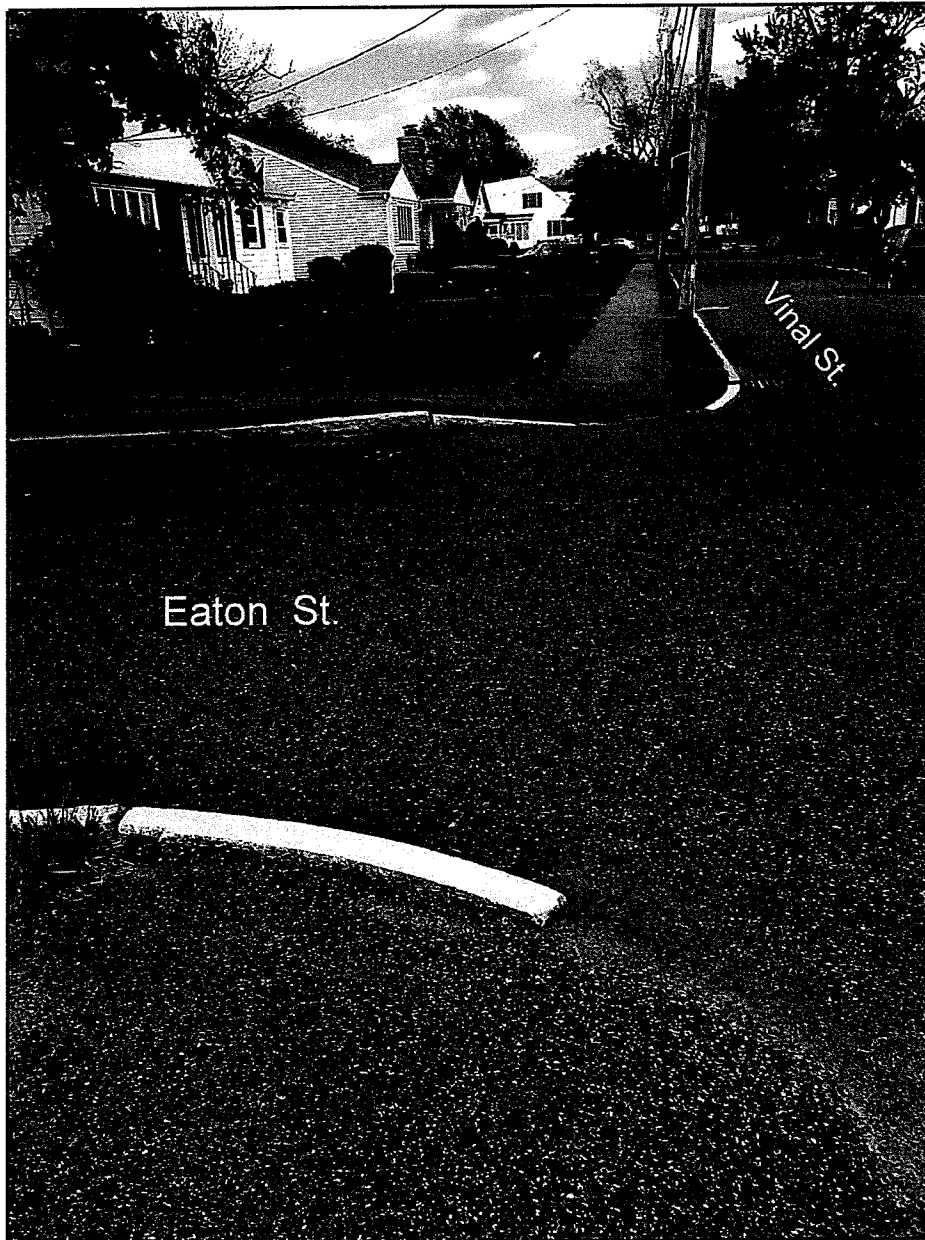

Our suggestions for Eaton Street between Hall Street and Vinal Street are not as clear cut. Because this section of roadway has already been milled and paved it would be difficult to remove the concrete curbing and install granite curbing. At the very least we could replace the bituminous sidewalks with concrete sidewalks and leave the concrete curbing in place and not mill and pave the roadway.

Another option would be to re-mill and re-pave the street from Hall to Vinal Street. Replace the concrete curbing with granite curbing and remove the bituminous sidewalk and install concrete sidewalks. The length of the roadway between Hall and Vinal is approximately two hundred ten (210') feet.
